

About Me

Hi, I'm Nandita Ranjan — a Computer Science and Engineering graduate from KIIT, driven by curiosity, creativity, and a passion for solving real-world problems through technology.

Throughout my four-year journey, I've immersed myself in everything from Data Structures to Cloud Computing, AI, and Big Data, blending theory with hands-on projects and internships. I believe code is more than logic — it's a way to build smarter, faster, and more human-centric solutions.

What sets me apart? I'm not just about code and grades. I thrive on collaboration, communication, and finding strategic ways to create impact. I've also explored areas like Prompt Engineering, Generative AI, and Human Resource Management — because being a great engineer today is about being versatile.

Whether it's building software, learning the next big tech trend, or working with diverse teams, I bring energy, adaptability, and a growth mindset to everything I do. I'm now seeking opportunities where I can contribute, learn, and grow — and maybe, leave the world a little better than I found it.

Let's build something exciting together!
